

YOKOGAWA

Digital Multimeter Series

TY700/TY500/732/731 Series

- TY7DD Series of 4.5-digit Handheld Multimeters
- **TY500** Series of 3.5-digit Handheld Multimeters
- **732** Series of 3.5-digit Handheld Multimeters
- **73101** of 3.5-digit Pocket Digital Multimeter

Yokogawa Meters & Instruments Corporation

Integral Action Time

Digital multimeters (DMMs) employ an A/D converter with a dual-integration system, which determines the measurement value by converting the input voltage into time using an integration AD converter. The interval to perform an integral action periodically is referred to as the integralaction time.

Measurement Accuracy

With DMMs, the measurement accuracy is generally expressed as: ±__% of reading + __digits. ("Reading" refers to the reading value, and is abbreviated as "rdg"; "digits" refers to the number displayed in the smallest decimal place, and is abbreviated as "dgt.") This expresses the range of values that a DMM may measure or represent for a given actual value.

Root Mean Square Value

The value most directly related to the energy of a given waveform. Refers to the square root of a value found by averaging the squares of instantaneous values of a waveform over a single cycle. (See Table 1, Figures 1 and 2.)

Mean Value

Refers to the average of the sum of instantaneous values, determined for a current half-wave. It is equivalent to calculating the surface area of a waveform.

Form Factor

Ratio of RMS value with respect to average value. Form factor = RMS value/mean value (See Figures 1 and 2.)

Crest Factor

Ratio of maximum value to RMS value. Crest factor = maximum value/RMS value(See Figures 1 and 2.)

Peak-to-Peak (P-P) value

Refers to the distance between the smallest and largest amplitudes in a waveform (see Figure 1).

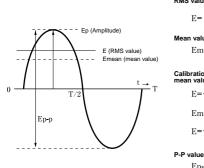

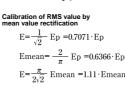

Figure 1. RMS and Mean Values of Sine Wave

 $E = \sqrt{\frac{1}{T}} \int_{0}^{T} e^{2}(t) dt$ (energy) Emean = $\frac{1}{T} \int_{0}^{T} |e(t)| dt$ (surface area)

Ep-p= $2\sqrt{2}$ E = 2.828 · E

CE Mark

The products of Yokogawa Meters & Instruments Corporation are subjected to design and evaluation testing to ensure compliance with the safety and EMC standards in accordance with the directives issued by the EC.

Electromagnetic Compatibility (EMC)

The parameters EMI and EMS are referred to as electromagnetic compatibility as they relate to compatibility within an electromagnetic environment.

Safety Standards

These standards lay out safety requirements that are to be met by a product with the objective of the preservation of human life and property. The applicable international standard is IEC 61010, and while a product must conform to this standard, there are also domestic standards laid out by individual countries. With these safety regulations, the range of use of a measurement device is specified by categorization in measurement categories I through IV to ensure the safety of the user. The designations "CAT II, 1000 V" or "CAT III, 600 V" at the input terminals of a measurement device, for example, indicates the applicable category and the maximum voltage for the device in terms of safety.

Frequency Characteristic

Refers to a characteristic that shows variations in input, measurement, or response with frequency. When measuring alternating current signals, a measured signal does not have a simple frequency, but often includes various frequencies ranging from lower frequencies to higher harmonics. To measure such signals more accurately, it is preferable to use a measurement device that has a broader frequency characteristic range.

Input Impedance

To prevent the measured object from being influenced during voltage measurement, you should use a measurement device with an extremely high input impedance.

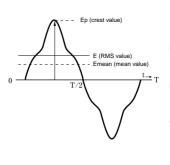

Decibel

A unit used for describing the change in electrical signal amplitude or noise level, or transmission systems in wired devices, etc. This parameter is also used to represent the level differences in voltage, current or related values, but is generally restricted to cases characterized by the relationship: $(I_1/I_2)^2 =$ $(V_1/V_2)^2 = P_1/P_2$. In the abbreviation "dB," "d" (deci) denotes 1/10, and "B" (Bell) denotes logarithm.

Table 1. RMS Value, Average Value, Waveform Factor and Crest Factor for a Typical Periodic Waveform

Item	Waveform	RMS	Mean value	Waveform factor	Crest factor
Sine wave		$\frac{1}{\sqrt{2}}$ =0.707	$\frac{2}{\pi} = 0.637$	$\frac{\pi}{2\sqrt{2}} = 1.11$	$\sqrt{2} = 1.414$
Half rectification wave	$ \land $	$\frac{1}{2}$ =0.5	$\frac{1}{\pi} = 0.318$	$\frac{\pi}{2}$ =1.571	2
Full rectification wave		$\frac{1}{\sqrt{2}}$ =0.707	$\frac{2}{\pi} = 0.637$	$\frac{\pi}{2\sqrt{2}} = 1.11$	$\sqrt{2}$ =1.414
Triangular wave	\sim	$\frac{1}{\sqrt{3}}$ =0.577	$\frac{1}{2}$ =0.5	$\frac{2}{\sqrt{3}}$ =1.155	√3 =1.732
Square wave		1	1	1	1

Figure 2. RMS of Distorted Waves

$e(t)=a_0+a_1\cos wt+\cdots+a_n\cos wt$ $+b_1 \sin wt + \cdots + b_n \sin nwt$ DC component Fundamental wave Harmonic component RMS of each spectrum $|\operatorname{En}| = \frac{\sqrt{a_n^2 + b_n^2}}{2}$ RMS value $E = \sqrt{E_0^2 + |E_1|^2 + |E_2|^2 + \dots + |E_n|^2}$

Instantaneous value and spectrum

Crest factor (CF) CF = Crest value RMS value RMS value Waveform factor = mean value

ortable equipments, etc Switchboard, circuit breaker, etc.

Measurement categories (CAT)

In order to ensure the safety of the user, IEC 60664 defines the ranges of use of measuring instruments by classifying power levels into measurement categories II through IV and O (None, other). This is because the excessive impulse or surge levels induced in a power line vary depending on the location of measurement (category). Categories

For measurement performed at the source of the low-voltage

with higher numerals designate locations that include larger surge voltages. Instruments that Internal wiring are designed for category Service IV Ш III can thus withstand drop higher surge voltages than Outlet instruments designed for category II. Measurement category Description O (None, other) Other circuits that are not directly connect to MEAINS For measurement performed on circuits directly connected to CAT.I the low-voltage installation. CAT.II For measurement performed in the building installation

CAT.IV

Most Reliable Handheld Digital Multimeters

Maximum Measurement Accuracy

0.020% rdg + 2 dgt (DC voltage) True RMS measurement

Safe Design

Conforms to EN61010-1 safety standard

Conforms to measurement category 1000 V AC/DC, CAT II and 600 V AC/DC. CAT IV

Shutters prevent erroneous insertion of test leads into current measurementterminals (terminal shutters)

The current terminals have terminal shutters that prevent erroneous setting of the measurement function and leadwire connections resulting from operational errors. The terminal shutters open and close according to the function switch position.

Closed Case Calibration

User calibration function

The TY series, simply performing special operations via front panel allows for quick and reliable adjustment. In addition, the series allows for onetouch adjustment of AC voltage- and AC current-to-frequency characteristics. The user calibration function leads to improved operation efficiency and cost reduction.

• External standard instrument required for calibration.

Full Support for Data Management

Two memory modes

- SAVE-mode memory
- A mode for manually saving any data
- Logging-mode memory
- A mode for automatically saving data at a specified interval Logging interval: 1 second to 30 minutes

	Memory capacity							
Model	SAVE-mode memory*	Logging-mode memory						
TY710	100	1000						
TY720	100	10000						

* Saved data can be checked on the display

Loaded with Measurement Functions

Peak hold function (TY720, for DC V/A measurement)

Supports waveforms of 1 ms or greater. You can capture instantaneous crest values not possible with ordinary maximum measurement functions.

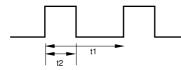

Relative and percentage value computation

Can display the measured values as the values relative to a reference value (defined by the REL key; even after data hold) or as the percentages of the reference value.

Percentage calculation: (Measured value - reference value) / (reference value), expressed as percentage.

Duty ratio (%) measurement

Displays the duty ratio of a pulse waveform: (High level period/1 cycle of waveform) x 100 = (t2/t1) x 100 [%]

AC+DC measurement

Measures RMS of a waveform in which ripple waveforms are superimposed on a direct current

Auto hold

Automatically hold the data measured when the test leads are disconnected from the measured object, thus freeing both hands for performing reliable measurement.

Real-time measurement

The optional communication package*1 sold separately (Model 92015) allows you to connect to a PC for transmitting large amounts of data that cannot be saved in the DMM internal memory.

You can transmit the saved data from the internal memory to a PC and process it using application software or spreadsheet software (Excel*2) for data management.

- *1 Communication cable and application software are included. *2 Excel is a registered trademark of Microsoft Corporation in the United States. *3 The communication cable employs an infrared system, so the device is electrically insolated.

For details of the application software, refer to page 7.

Minimum/maximum/average display

Allows recording of minimum, maximum and average values along with their respective times (time passed since the start of measurement)

Decibel calculation

Computes the logarithm of an alternating current, and uses it together with the relative value computation to display the relative value. You can select the standard resistance according to the application, such as audio or communication circuit signal measurement.

* Selectable standard resistance values: 4/8/16/32/50/75/93/110/125/135/150/200/250/300/500/600/800/900/1000/1200Ω

Full Display Functions

50,000-count, 51-segment bar graph display

Backlight provided as standard for when working in dark places. Simultaneous display of frequency and voltage, frequency and duty ratio or decibels and voltage on the dual display.

Display: V AC and V DC measurements

In addition to the above, the sub-display can display the reference value for differential calculation, memory storage numbers for measured data, minimum/maximum/average value recording times, and standard resistance during decibel calculation.

TY700 General Specifications

Measurement Functions	:DC voltage, AC voltage, DCV+ACV, DC current, AC current, DCA+ACA, resistance, frequency, temperature, capacitance,
	duty cycle, decibel calculation, continuity check, diode test, low-power resistance (TY720 only)
	For AC voltage/current, RMS/MEAN detection can be switched (TY720 only).
	For AC voltage/current, the low-pass filter can be turned on/off (TY720 only).
Additional Functions	:Data hold/auto hold/peak hold (TY720 only), range hold, maximum/minimum/average values
	resistance, capacitance zero, relative and percentage value calculation, manual-mode memory, logging-mode memory,
	auto power off, backlight (white LED)
Display	:5-digit LCD:7-segment
	Digital display: ······ Main display; [50,000] counts
	Sub-display ; [50,000] counts
	Bar graph display:
	Polarity indicator: "" appears automatically when the polarity is negative
	Overrange indicator:
	Low-battery indicator:
Measuring Rate	:6 times/sec (Frequency: 1 time/sec, Capacitance: max. 0.03 times/sec (50mF), Resistance: 4 times/sec)
	Bar graph display: 15 times/sec
Operating Temp. and Humidity	r :-20 to 55°C; 80% RH or less (no condensation) 40 to 55°C: 70% RH or less
Storage Temp. and Humidity	:-40 to 70°C; 70% RH or less (no condensation)
Temperature Coefficient	:Add the accuracy 0.05/°C to the basic accuracy at a temperature within -20 to 18°C and 28 to 55°C. For continuous
	measurements, add 1 digit/°C for DC voltage (DCV) and DC current (DCA). (Add 3 digits/°C for 50mV, 5A, and 10A ranges)
Power Supply	:Four AA (R6) dry cells
Battery Life	Approx. 120 hours (for continuous DC voltage measurement with alkaline cells)
Withstanding Voltage	:6.88kV for 5 seconds (between input terminals and casing)
Dimensions	:Approx. 90(W) x 192(H) x 49(D) mm
Weight	:Approx. 560g (including batteries)
Compliance with Standards	:Safety EN61010-1, EN61010-2-030, EN61010-031, 1000V CAT III, 600V CAT IV, pollution level 2, indoor, 2000m max, above sea level
	UL 61010-1, CAN/CSA-C22.2 No. 61010-1,
	UL 61010-031. CAN/CSA-C22.2 No. 61010-031
	EMC: EN61326-1 Class B, EN55011 Class B Group 1, EN61326-2-2

Standard Accessories :AA (R6) dry cells: 4, Test lead set (98015): 1, Fuse (installed) 440mA/1000V and 10A/1000V, Instruction manual: 1

Safe design and supports various maintenance applications.

Direct reading of various sensor output signals

The DMM can directly read the various sensor output signals (mV DC/AC) at any scaling. The units can be changed (16 units are available). Output signal and scaled value are simultaneously displayed.

Reads maximum 60 A when used with the TY500 series.

Maximum Reliability and Safety

Reliability

High accuracy and safety

Accuracy: 0.09% rdg + 2 dgt (DC voltage) True RMS measurement Only TY530 can switch RMS and mean detection.

Safe Design

Conforms to EN61010-1 safety standard.

Conforms to overvoltage category 1000 V AC/DC, CAT II and 600 V AC/DC. CAT IV.

Shutters prevent erroneous insertion of test leads into current measurement terminals (terminal shutters).

If the function is switched to other than current measurement while a test lead remains inserted in a current measurement terminal, the fuse built into the DMM can not protect the circuits. The terminal shutters prevent such accidental errors.

Closed Case Calibration

User calibration function

The TY series, simply performing special operations via front panel allows for quick and reliable adjustment. In addition, the series allows for onetouch adjustment of AC voltage- and AC current-to-frequency characteristics. The user calibration function leads to improved operation efficiency and cost reduction.

External standard instrument required for calibration.

Data Storage Method

Two memory modes (TY530 only)

Selectable from 2 types of memory mode to suit field needs.

- SAVE-mode memory
- A mode for manually saving any data
- Logging-mode memory
- A mode for automatically saving data at a specified interval

	Memory capacity		
Model	SAVE-mode memory	Logging-mode memory	
TY530	100	1600	

Real-time measurement

The optional communication package*1 sold separately (Model 92015) allows you to connect to a PC for transmitting large amounts of data that cannot be saved in the DMM internal memory.

You can transmit the saved data from the internal memory to a PC and process it using application software or spreadsheet software (Excel*2) for data management.

*1 Communication cable and application software are included.

*2 Excel is a registered trademark of Microsoft Corporation in the United States. *3 The communication cable employs an infrared system, so the device is electrically insolated.

For details of the application software, refer to page 7.

Accessory AC/DC clamp-on probe (Model 96095)

Features

A compact, light, and portable device with 12-mm caliber useful for tangled wiring. When used with this probe*1, the DMM can measure and display current (which it otherwise cannot do by itself). The TY500 series can directly read up to 60 A when used with the probe (in sensor mode).

Optional Accessories

General Specifications 73201 / 02 / 03 / 04

Name	Model	Specification	
Fuse	F05	500 mA/600 V	
	F02	15 A/600 V	
Test leads	RD031	Red / black (1 set)	
Carrying case (hard)	B9646GB	Houses the DMM and test leads	
Rubber case	93007	For DMM	

- Compact size, ideal for carrying
- Large display for easy viewing
- Safe design allows measurement in excess of 20 A (excluding 73204)
- Special model for voltage measurement (73204)
- · Simple auto hold function
- Capacitors can be checked (73202/73203)

Performance

Test conditions: Temperature and humidity = $23^{\circ}C \pm 5^{\circ}C$, 80% RH or less;Accuracy = \pm (% of reading + digits). Note: Response time is the time required for achieving accuracy specified for the corresponding range.

DC Voltage Measurement (.... V)

Range		Accuracy		Input Resistance	Maximum Input
naliye	73201	73202/04 73203		input nesistance	Voltage
400.0 mV	0.5% + 1			>100 MΩ	
4.000 V	0.3% + 1		0.3% + 1	11 MΩ	
40.00 V		0.5% + 1			600 V
400.0 V	0.75% + 1			10 MΩ	
600 V					

Response time: 1.5 seconds or less for 400 mV range, 1 seconds or less for all other ranges

AC Voltage Measurement (\sim V)

Deese	Accuracy			Input Resistance	Maximum Input	
Range	73201 73202		73203/04	Input Resistance	Voltage	
4.000 V	1% + 5			>11 MΩ, <50 pF		
40.00 V			0.75% 5		600 Vrms	
400.0 V			0.75% + 5	>10 MΩ, <50 pF	600 VIIIIS	
600 V						
Response time: 2 seconds or less						

Mean-value detection and RMS-value calibration

DC Current Measurement (.... A)

Not available with 75204							
Range	Accuracy			Voltage Drop	Maximum Input Current		
nange	73201	73202	73203	voltage brop	Maximum input current		
400.0 µA *1							
4000 µA	1% + 2			<0.17 mV/µA	400 mA		
40.00 mA *1		1% + 2			(500 mA/600 V fuse-protected)		
400.0 mA							
4.000 A	2% + 2			<0.04 V/A	10 A		
10.00 A *2		270 + 2			(15 A/600 V fuse-protected)		
*1. Drift in the least significant digit may occur							

*2: Measurement of 11 to 20 A can be performed within 30 seconds. A warning buzzer sounds when 30 seconds have passed. Response time: 1 second or less

AC Current Measurement (\sim A)

AC current measurement (~ A)							
04			Mean-value	detection and RMS-value calibration			
Ac	curacy (40 - 500	Hz)	Voltago Drop	Movimum Input Current			
73201	73202	73203	voltage prop	Maximum Input Current			
2% + 20			-0.17 mV/uA				
2% + 5			<0.17 IIIV/µA	400 mA			
2% + 20			<2 m)//mA	(500 mA/600 V fuse-protected)			
2% + 5			< 3 IIIV/IIIA				
0.5% . 00			0.04.11/4	10 A			
	2.5% + 20		<0.04 V/A	(15 A/600 V fuse-protected)			
	04 Ac	04 Accuracy (40 - 500 1 73201 2% + 20 2% + 5 2% + 5 2% + 20	04 Accuracy (40 - 500 Hz) 73201 73202 2% + 20 2% + 5 2% + 5 2% + 5	Δccuracy (40 - 500 Hz) Mean-value f 73201 73202 73203 2% + 20 <0.17 mV/μA			

Tortik The least significant digit may occur.
 "2: Measurement of 11 to 20 A can be performed within 30 seconds. A warning buzzer sounds when 30 seconds have passed.
Response time: 2 second or less

Resistance Measurement (Ω)

Range	Accuracy	Maximum Testing	Open-circuit	Input Protection
	73201 to 73204	Current	Voltage	Voltage
400.0 Ω	0.75% + 2	<1 mA	<3.4 V	
4.000 kΩ		<0.5 mA	<1.0 V	
40.00 kΩ	0.75% + 1	<70 µA		600 V
400.0 kΩ		<7 µA	<0.7 V	000 V
4.000 MΩ	2% + 1	<0.7 µA	<0.7 V	Í
40.00 MΩ	5% + 2	<70 µA		

Response time: 1 second or less for 400 kΩ range or less, 5 seconds or less for 4 MΩ range, 15 seconds or less for 40 MΩ range

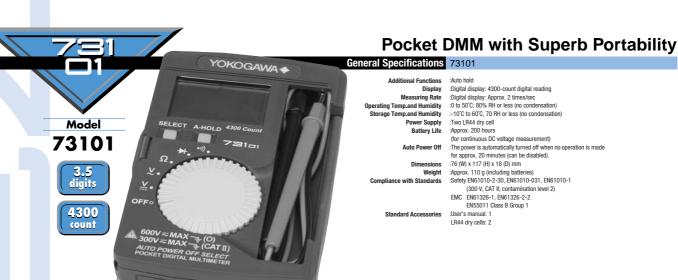

Continuity Check (3))

Range	Continuity Beeper	Open-circuit Voltage	Input Protection Voltage				
naliye	73201 to 73204	Open-circuit voltage					
400.0 Ω	Buzzer sounds at 50 \pm 20 Ω or less	<3.4 V	600 V				
Response time: 0.2 second or less (buzzer response)							

Diode Test (--K-)

Range	Accuracy	Open-circuit Voltage	Input Protection Voltage				
naliye	73201 to 73204	open-circuit voltage	Input Protection voltage				
2.00 V	1% + 1 (testing current 1 mA or less)	<3.4 V	600 V				
Response time: 1 second or less							

Range		Accuracy		Input Protection	
naliye	73201/04	73202 73203		Input Protection	
20.00 nF					
200.0 nF		2% + 5	tunical	500 mA/250 V

Output Voltage	50mV,AC	500mV,AC	500mV,AC	500mV,AC	250mV,AC	500mV,AC	500mV,AC
Accuracy *varies according to input/Amplitude	±0.5% of rdg	±0.5% of rdg	±0.5% of rdg	±0.5% of rdg	±1.0% of rdg	±1.0% of rdg	±1.0% of rdg
Frequency Range	20Hz - 5kHz	20Hz - 20kHz	20Hz - 20kHz	20Hz - 5kHz	45Hz - 66Hz	30Hz - 1.5kHz	10Hz - 20kHz
Maximum Circuit Voltage	50V,AC	300V,AC	600V,AC	600V,AC	600V,AC	600V,AC	1000V,AC (pri)

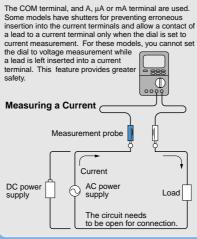

Note:Use AC voltage range of the DMM.

Note:Need to covert the meter reading except TY500series.

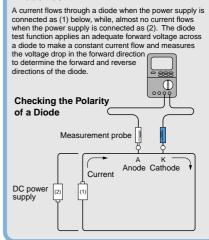

Basic Usage Digital Multimeters

Current Measurement

Diode Test

10
